GENERAL TOPICS AND PROJECT AREA

Starting from the persistence of conditions of isolation and separation that often characterize the archaeological space in relation to the context in which it is inserted, the workshop goal is to reflect on the topic of the relationship between archaeology and public space in urban areas, especially marginal ones. The topic will be addressed through a strategic vision that points to overcome the logic of an archaeological *enclave*, in order to transform spaces, materials, figures, which are part of the ancient places into new possible places of urban inclusion, always considering the need for safeguard and enhancement. To reason on this issue, the case study of the Roman villa of Caius Olius Ampliatus of Ponticelli is considered, that is an archaeological area located in the eastern part of Naples, where public space can play a significant role in processes of social and urban regeneration. In this archaeological area, it is possible to experiment design devices that can establish new relationships between the Roman villa and the neighboring context, in a vital urban dynamic, also offering a development orientation for unfinished spaces, neighboring isolated architectures and real places of waste. In this context, the main topics are: the issues of urban accessibility and the breaking of fences; the redefinition of the landscape and open spaces; the protection of the ruins and the social inclusion.
